

ABSTRACT OF THE INVENTION

According to one aspect of the present invention, a method is provided in which information about a patient is received. The information about the patient may include diagnosis information based upon a diagnosis of the patient performed by a healthcare
5 provider. Upon receiving the information about the patient, a query function is performed to retrieve from a database a list of data sources that correspond to the information received. One or more documents are generated that contain the list of data sources retrieved from the database.
